SEPM EXP NO: 5

TO BUILD THE PIPELINE OF JOBS USING MAVEN / GRADLE / ANT IN JENKINS, CREATE A PIPELINE SCRIPT TO TEST AND DEPLOY AN APPLICATION OVER THE TOMCAT SERVER

Mustafa Sarangpurwala T21-88 AI&DS

Theory:

1. Introduction to Jenkins and CI/CD

Jenkins is an open-source automation server used for continuous integration and continuous deployment (CI/CD). It helps automate the software development lifecycle by building, testing, and deploying applications.

1.1 CI/CD Concepts

- Continuous Integration (CI): Automatically integrates code changes into a shared repository and runs tests.
- Continuous Deployment (CD): Automates the process of deploying applications to production or staging environments.

1.2 Tools Used

- Jenkins Automation server.
- Maven/Gradle/Ant Build automation tools.
- Tomcat A web server for deploying Java applications.

2. Installing and Configuring Jenkins

1. Download and Install Jenkins:

- Download from Jenkins official site.
 Install and start the Jenkins service.
- o Access Jenkins at http://localhost:8080/.

2. Install Required Plugins:

o Go to Manage Jenkins > Plugin Manager. o Install Pipeline, Maven Integration, and Deploy to Container plugins.

3. Creating a Jenkins Pipeline

Jenkins pipelines define a series of automated steps for building, testing, and deploying applications.

3.1 Steps to Create a Pipeline

- 1. Open Jenkins Dashboard and click on New Item.
- 2. Select Pipeline and provide a project name.
- 3. Click OK and navigate to the Pipeline section.
- 4. Write a Pipeline script (Declarative or Scripted) to define the build and deployment process.

4. Writing a Jenkins Pipeline Script

```
The following script builds a Java application using Maven and deploys it to Tomcat:
groovy CopyEdit pipeline {
                               agent any
                                            stages
      stage('Checkout Code') {
                                        steps {
                                                         git
'https://github.com/your-repository.git'
     }
     stage('Build with Maven') {
steps {
          sh 'mvn clean package'
       }
     }
     stage('Deploy to Tomcat') {
                                         steps {
          deploy
                    adapters:
                                [tomcat8(credentialsId: 'tomcat-cred',
                                                                                           url:
                                                                            path:
'http://yourtomcat-server:8080')],
war: '**/*.war'
```

```
}
}
}
```

5. Configuring Jenkins for Deployment

- 1. Configure Tomcat Server:
 - o Install Tomcat and start the server. o Set up a user with deployment privileges in conf/tomcatusers.xml: xml CopyEdit

```
<role rolename="manager-gui"/>
<role rolename="manager-script"/>
<user username="admin" password="admin" roles="manager-gui,manager-script"/> o

Restart Tomcat.
```

- 2. Set Up Jenkins Credentials:
 - o Go to Manage Jenkins > Credentials. o Add a username/password credential for Tomcat deployment.
- 3. Run the Pipeline in Jenkins:
 - o Click Build Now to execute the pipeline. o Verify the deployment at http://your-tomcat-server:8080/your-app.

Example 1:

Creating a job:

Start building your software project

```
Create a job +
```

Naming the job and setting it as freestyle:

Enter an item name Example1 » Required field Freestyle project

Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.

Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

Multi-configuration project

Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

Folder

Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

Multibranch Pipeline

Creates a set of Pipeline projects according to detected branches in one SCM repository.

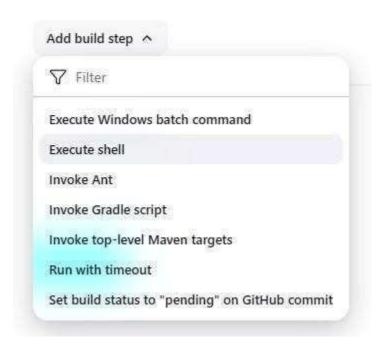

Organization Folder

Creates a set of multibranch project subfolders by scanning for repositories.

Selecting build type as "Execute shell":

Build Steps

Entering a simple command for the shell execution:

Build Steps

Applying and saving the project configuration:

Building the project:

Console output (after building):

<u>Example 1.2: Taking parameters through files</u> Contents of script example1.cmd:

Executing script example1.cmd on the terminal:

```
Microsoft Windows [Version 10.0.22621.3296]
(c) Microsoft Corporation. All rights reserved.

C:\Users\AI&DS 202>Microsoft Windows [Version 10.0.22631.3155) (c) Microsoft Corporation. All rights reserved.
'Microsoft' is not recognized as an internal or external command,
operable program or batch file.

C:\Users\AI&DS 202>C:\Admin\Academics\TSEC\Start3\SEPM>example1.cmd
The system cannot find the path specified.

C:\Users\AI&DS 202>"Hello... Your address is "
'"Hello... Your address is "' is not recognized as an internal or external command,
operable program or batch file.

C:\Users\AI&DS 202>C:\Admin\Academics\TSEC\Start3\SEPM>example1.cad Tanishq
The system cannot find the path specified.

C:\Users\AI&DS 202>"Hello Tanihsq... Your address is "
'"Hello Tanihsq... Your address is "' is not recognized as an internal or external command,
operable program or batch file.

C:\Users\AI&DS 202>C:\Admin\Academics\TSEC\Start3\SEPM>example1.cmd Tanishq Girgaon "Helle Tanishq... Your address is Girgaon"
The system cannot find the path specified.
```

Modifying the Jenkins project to execute the script while supplying required parameters:

Build Steps

≡ Execute Windows batch command ?	×
Command	
See the list of available environment variables	
C:\Admin\Academics\TSEC\Start3\SEPM\example1.cmd Siddhant Goregaon	
	3
Advanced ∨	
·	
Add build step ∨	

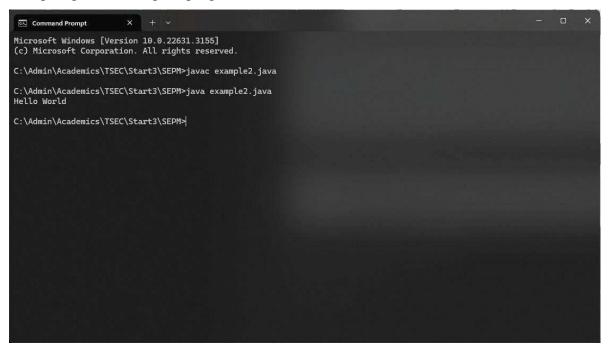

Console output after building the modified project:

₹ Status	⊘ Console Output
√> Changes	Started by user Siddhast Chetlur
Console Output	Running as SYSTEM
View as plain text	Bullding in workspace C:\ProgramButa\Tenkinn\topkspace\Example\Tenkinn\workspace\Example\Tenkinn\workspace\Example\Tenkinn\workspace\Example\Tenkinn\topkspace\Tenkinnn\topkspace\Tenk
☐ Edit Build Information	C:\ProgramButa\Zenkinsjenkins\workspace\Examplel>C:\Admin\Academics\TSEC\Start3\SEPH\examplel.cnd Siddhant (Goregaon "Wello Siddhant Vour address is Goregaon"
Delete build '#4'	relia statement Your abovess is corregion Finished: SUCCESS
- Provious Smild	

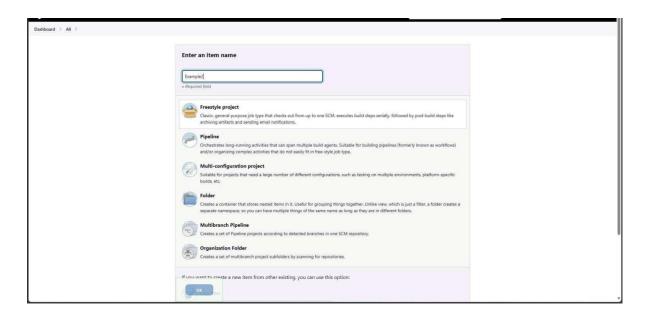

Example 2 Example 2.1: Running a Java program under

Jenkins Creating a simple Java program:

Compiling and running the program on the terminal:

Creating a new freestyle project:

Configure new project:

Build Steps

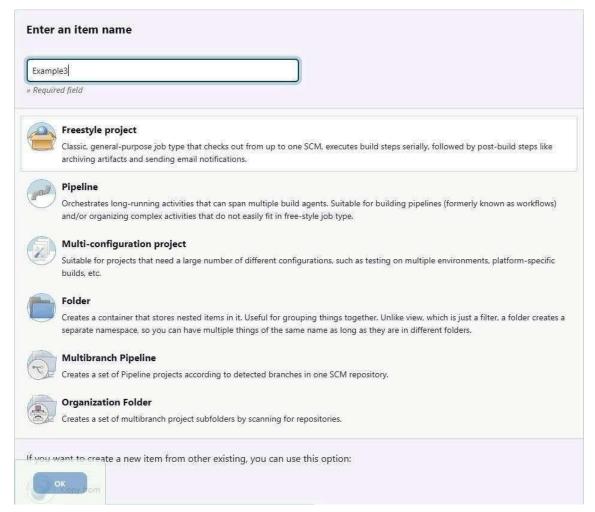

Console output after building:

⊘ Console Output

Example 3 Example 3.1: Parameterise build

Creating a new freestyle project:

Enabling parameterisation and adding a String parameter:

Configuring the string parameter as Fname:

Adding a choice parameter and configuring it as City with the following choices:

Creating a script which takes 2 arguments for name and city:

```
C:\Users\AI&DS 202>Microsoft Windows [Version 10.0.22631.3155] (c) Microsoft Corporation. All rights reserved.
'Microsoft' is not recognized as an internal or external command,
operable program or batch file.

C:\Users\AI&DS 202>C:\Admin\Academics\TSEC\Start3\SEPH>example3.cnd
The system cannot find the path specified.

C:\Users\AI&DS 202>Hello your name is and your city is
'Hello' is not recognized as an internal or external command,
operable program or batch file.

C:\Users\AI&DS 202>C:\Admin\Academics\TSEC\Start3\SEPH example3.cmd Tanishq
The system cannot find the path specified.

C:\Users\AI&DS 202>Hello your name is Tanishq and your city is
'Hello' is not recognized as an internal or external command,
operable program or batch file.

C:\Users\AI&DS 202>C:\Admin\Academics\TSEC\Start3\SEPM>example3.cmd Tanishq Bandra
The system cannot find the path specified.

C:\Users\AI&DS 202>Hello your name is Tanishq and your city is Bandra
'Hello' is not recognized as an internal or external command,
operable program or batch file.

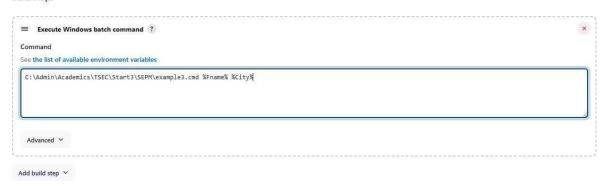

C:\Users\AI&DS 202>Hello your name is Tanishq and your city is Bandra
'Hello' is not recognized as an internal or external command,
operable program or batch file.

C:\Users\AI&DS 202>C:\Admin\Academics\TSEC\Start3\SEPH|

C:\Users\AI&DS 202>C:\Admin\Academics\TSEC\Start3\SEPH|
```

Configuring build steps:

Build Steps

Entering parameters for build:

Project Example3

Finame Siddhant	
Sidonant	
city	
Bandra	~

Console output after building:

✓ Console Output

```
Started by user Siddhant Chetlur

Running as SYSTEM

[Envinject] - Loading node environment variables.

Building in workspace (:\ProgramOata\zenkins\.jenkins\workspace\Example3

[Example3] $ cmd /c call c:\WiNDOMS\TEMP\jenkins14094536165150986151.bat

C:\ProgramOata\zenkins\.jenkins\workspace\Example3>C:\Admin\Academics\TSEC\Start3\SEPM\example3.cmd Siddhant Bandra

Hello your name is Siddhant and your city is Bandra

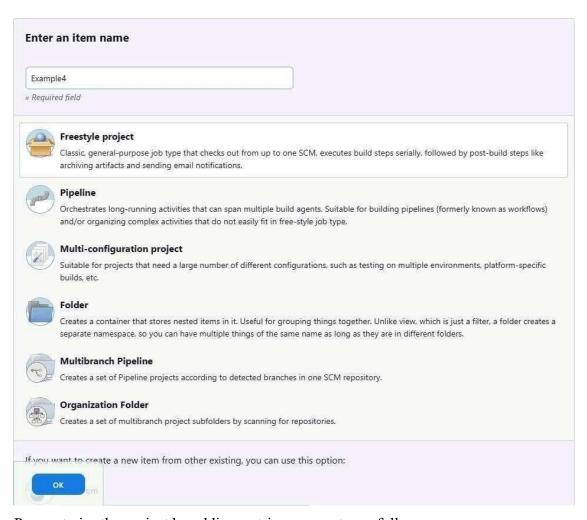

Finished: SUCCESS
```

Example 3.2: Running a Java program with parameters Creating

a Java program with an input argument:

Testing the program on the terminal:

Creating a new freestyle project:

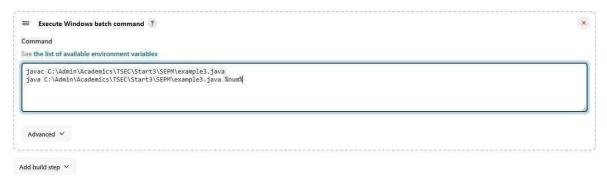

Parameterise the project by adding a string parameter as follows:

Configure the build steps:

Build Steps

Entering the parameter for the build:

Project Example4

This build requires parameters:

num

25

D Build Cancel

Console output after building:

✓ Console Output

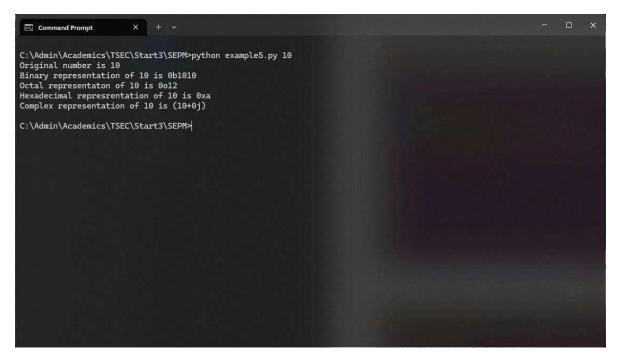

Example 5 Example

5.1: Running a Python program Creating a simple Python

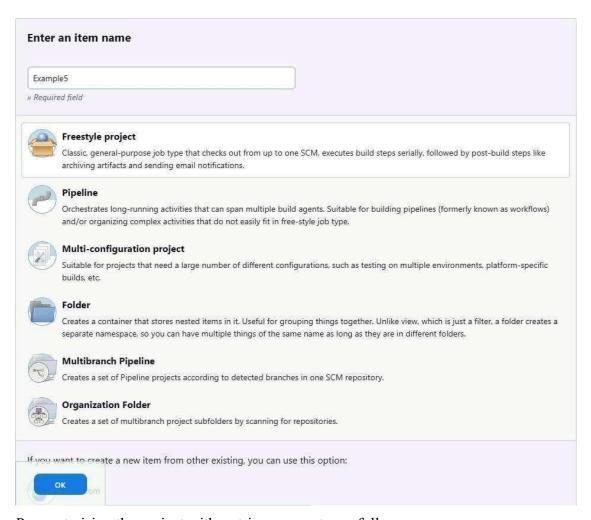

script:

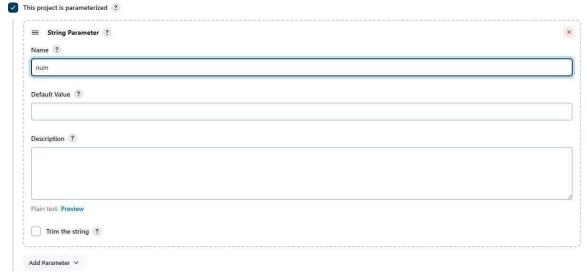

Running the Python script on the terminal:

Creating a new freestyle project:

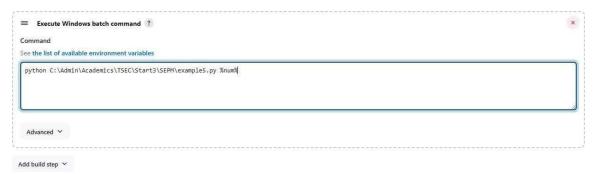

Parameterising the project with a string parameter as follows:

Configuring the build steps:

Build Steps

Setting the parameter for the build:

Project Example5

Console output after building:

⊘ Console Output

Conclusion

This experiment demonstrated how to automate a software build and deployment process using Jenkins. By integrating Maven, Gradle, or Ant, we streamlined the compilation and testing of applications, while Jenkins facilitated continuous deployment to a Tomcat server.
